

## Integrates Seamlessly with Your Business Processes

Users download temperature data from their loggers either manually through the InTemp app to their mobile device or automatically to the cloud via the optional CX Gateway device. Reports can be automatically created in the designated InTempConnect account where data can be analyzed from a central location or integrated with ERP or business management systems.

### 21 CFR Part 11 Compliance

InTempConnect is a 21 CFR Part 11 compliant system, providing secure electronic records and simplifying the process of managing data, passing regulatory audits, and ensuring product quality

### Auto-sync Data from InTemp App

Data is uploaded from all logger deployments via mobile devices or automatically from the optional CX Gateway device, giving centralized visibility into the global supply chain

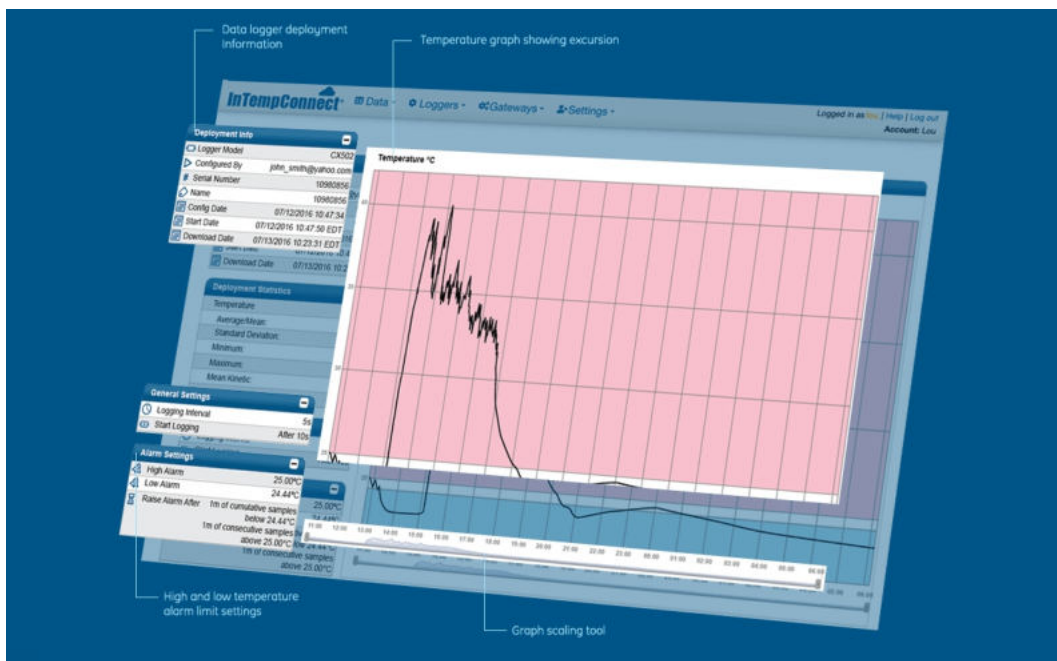

### Email and SMS Alerts

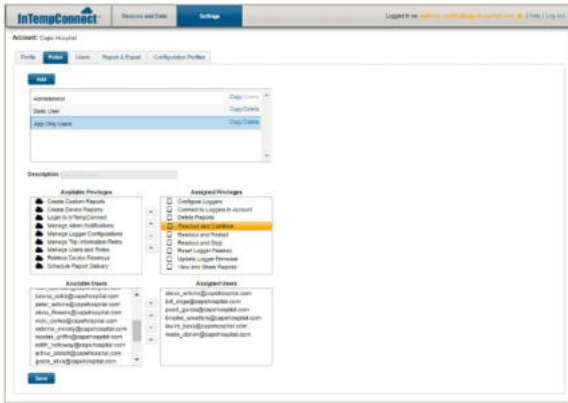

Set up automated alerts for downloads, and alarms ensuring immediate notification of temperature excursions

### Auto-sync Logger Profiles to InTemp App

Create and manage logger configuration profiles within InTempConnect, and automatically sync them with mobile devices in the field

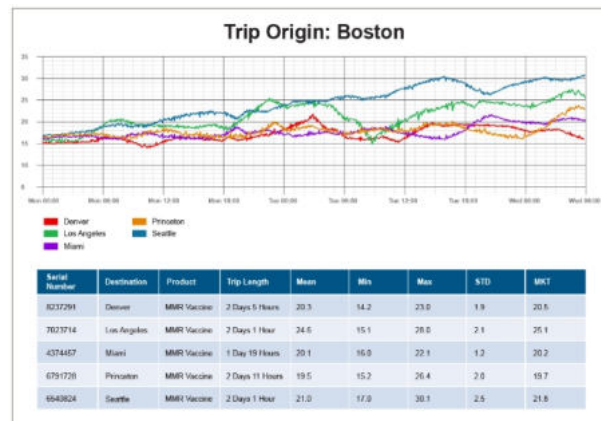

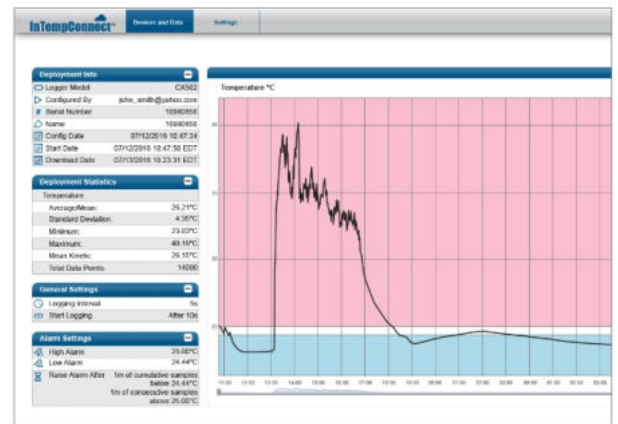

### Securely Coordinate Global Logistics and Quality Teams

Your InTempConnect account is automatically locked with an encrypted passkey, and only users designated by an administrator are able to connect to it, ensuring secure electronic records.

### Easily Access Global Temperature Data

View all your data within InTempConnect, including deployment data, graphs of logged data, user activity, alarm information, and more. Generate Secure PDF and XLSX format files for easy export, simplifying regulatory compliance.

### Use Trip Information to Drive Supply Chain Analytics

Quickly assign trip information such as destination, product, or shipping methods from your mobile device during logger deployments. Decision-makers can review filtered trip and supply chain data and view pertinent KPI reports instantly or at scheduled intervals.
